

Pneumotrophin PMG® Is A Special Combination Formula That Supplies Nutrients From Its Principal Ingredients Of 120 Mg Of Bovine Lung PMG™ Extract, Calcium Lactate, And Magnesium Citrate

The primary purpose of the lungs is to bring air and blood into intimate contact so that oxygen can be brought to the tissues and carbon dioxide removed from them. This is achieved by two pumping systems - one moving a gas(air) and the other a liquid(blood).

*Introduced in 1952
Bottle Size: 90 Tablets*

How Pneumotrophin PMG Keeps You Healthy

Maintains cellular health

Protomorphogen™ extract is the brand name of Standard Process' extracts derived from nucleoprotein-mineral molecules. The foundation for the function of these uniquely formulated nucleoprotein-mineral extracts comes from the antigen-antibody reaction that takes place during normal cell maintenance. The antigenic properties promote healthy cellular division, function, and growth. When a tissue needs support, at least a dozen different compounds are formed that can cause white blood cells to travel together toward the compromised area. They include degenerative products of the tissues themselves. These substances strongly activate the macrophage system, and within a few hours, the macrophages begin to devour the destroyed tissue byproducts. At times, the macrophages can also affect the structure of the remaining healthy cells. The bovine lung PMG™ extract in Pneumotrophin PMG appears to neutralize the circulating antibody, thereby contributing to the maintenance of cellular health.*

Helps keep bones and teeth strong

Calcium is the most important element required for the body to build and maintain strong bones, teeth, and to trigger a number of other important physiological processes. However, some forms of calcium found in the food chain are not absorbed by the body as effectively as others and precious benefit is lost. Calcium lactate is a highly bio-available and useful form of this important element, since it converts to calcium bicarbonate in one chemical step. It is the calcium "form of choice" for many calcium supplements.*

Supports metabolic function

While magnesium is present in most cells in only minute quantities, it plays an important role in human metabolism, as does its partner, calcium. It functions in such reactions as nerve conduction and nerve excitability; transfer of energy, muscular activity; and many other specific processes. Magnesium functions as a co-factor, assisting enzymes in catalyzing many chemical reactions. Magnesium and calcium are synergistic, meaning that what they do for the body together, they cannot perform on their own. Magnesium deficiencies are often accompanied by calcium and potassium deficiencies.*

What Makes Standard Process Pneumotrophin PMG Unique

Contains Protomorphogen™ extracts

- Protomorphogen™ extracts are remarkable ingredients extracted and processed in a singularly unique way by Standard Process Inc
- Use only adult sources of Protomorphogen™ extracts because they contain the important antigenic properties of adult nucleoprotein-mineral determinants, the foundation of the product
- Pneumotrophin PMG provides nutritional ingredients and support for the lungs*

The calcium lactate in Pneumotrophin PMG is not derived from a dairy source

- We obtain our calcium lactate from pure-vegetable sources of calcium

Unique Processing

Exclusive low-temperature, high-vacuum drying technique

- Preserves the tissue's enzymatic vitality and nutritional potential

Expert microbiologists and chemists in on-site labs constantly conduct bacteriological and analytical tests of raw materials, product batches, and finished products

- Ensures consistent quality and safety

Vitamin and mineral analyses conducted validate product content and specifications

- Assures high quality and delivery

Each tablet supplies 120 mg of bovine lung PMG™ extract. Proprietary blend: Bovine lung PMG™ extract, and magnesium citrate.

Other ingredients: Calcium lactate, cellulose, and calcium stearate.

Sold to health care professionals. Suggested use: 1 tablet per meal, or as directed.
