Renatrophin PMG®

Renatrophin PMG is a Special Combination Formula Supporting Healthy Kidney Gland Function

The kidneys serve as the body's blood filtration system, eliminating waste products through urine while returning decontaminated water to the blood plasma. All the blood contained inside the body flows through the kidneys approximately 20 times during an hour's time. As blood passes through the kidney, water and dissolved substances are filtered through the capillary walls. Blood and proteins are retained within the capillaries and useful materials such as water, glucose, amino acids, vitamins, and minerals are reabsorbed. This essential filtration and resorption process is responsible for helping to maintain the delicate water balance in the body.

How Renatrophin PMG Keeps You Healthy

Maintains cellular health

Protomorphogen™ extract is the brand name of Standard Process' extracts derived from nucleoprotein-mineral molecules. The foundation for the function of these uniquely formulated nucleoprotein-mineral extracts comes from the antigen-antibody reaction that takes place during normal cell maintenance. The antigenic properties promote healthy cellular division, function, and growth. When a tissue needs support, at least a dozen different compounds are formed that can cause white blood cells to travel together toward the compromised area. These compounds include degenerative products of the tissues themselves. They strongly activate the macrophage system, and within a few hours, the macrophages begin to devour the destroyed tissue byproducts. At times, the macrophages can also affect the structure of the remaining healthy cells. The bovine kidney PMG™ extract in Renatrophin PMG appears to neutralize the circulating antibodies, thereby contributing to the maintenance of cellular health.†

Improves calcium absorption and supports nervous system function

Calcium lactate is a highly soluble calcium salt and naturally bioavailable—it changes to calcium bicarbonate (the type used by the body) in one chemical step. Unlike some other forms of calcium that are less soluble in water and need higher acid concentrations to be absorbed, calcium lactate exists near a more neutral pH and does not require acid conditions to work. Calcium is important for the healthy functioning of the nervous system and transmission of nerve impulses. The calcium lactate in Renatrophin PMG is derived from pure-vegetable sources of calcium, not dairy sources.†

Sustains metabolic efficiency

While magnesium is present in most cells in only minute quantities, it plays an important role in human metabolism, as does its partner, calcium. It functions in such reactions as nerve conduction and nerve excitability, transfer of energy, muscular activity, and many other specific processes. Magnesium functions as a cofactor, assisting enzymes in catalyzing many chemical reactions. Magnesium and calcium are synergistic, meaning that what they do for the body together, they cannot perform on their own.†

Introduced in: 1954 Content: 90 Tablets

Supplement Facts:

Serving Size: 1 tablet Servings per Container: 90

%DV

Calorles

1

Each tablet supplies 190 mg bovine kidney PMG^{TM} extract.

Proprietary Blend: Bovine kidney PMG™ extract and magnesium citrate.

Other Ingredients: Calcium lactate, cellulose, and calcium stearate.

Suggested Use. One tablet per meal, or as directed.

Sold through health care professionals.

Renatrophin PMG®

What Makes Renatrophin PMG Unique

Product Attributes

Contains enzyme factors and proteins combined with bovine kidney PMG™ extract

 Helps to support the kidney's filtration of wastes and reabsorption of useful materials†

Contains Protomorphogen extracts

- Standard Process uses a unique manufacturing method of deriving tissue cell determinants from animal glands and organs
- Help provide cellular support and rehabilitation to the corresponding human tissues
- Important antigenic properties of nucleoprotein-mineral determinants are the foundation of the product;

The calcium lactate in Renatrophin PMG is a pure-vegetable source of calcium

Not derived from a dairy source

Manufacturing and Quality Control Processes

Low-temperature, high-vacuum drying technique

Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components

The nutrients in Renatrophin PMG are processed to remain intact, complete nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories continually conduct bacterial and analytical tests on raw materials, product batches, and finished products

Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications

Assures high-quality essential nutrients are delivered

common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature-in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists-known and unknown-bioactivity is markedly

Out founder, Dr. Royal Lee challenged

Whole Food Philosophy

enhanced over isolated nutrients Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to an isolated or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual
